It was created in C++ / DirectX 10+ and is available for Windows, Mac and Linux. It was tested with DirectX 10 and 11 and has no known issues with them. The application has a wizard for easy installation. It is very responsive, and quick to analyze a picture for possible fonts. Caveats: The application uses a lot of CPU resources. The best is to open it with its processor's minimum performance value. For best results, use 16-bit desktop color instead of 24-bit desktop color. Selecting the "fonts not available" option is not recommended, as it will slow down the application's speed, and I'm not sure if it works for the last version of the application. NOTE: the application uses a screen magnifier called Virtual Reality Device Driver. If you are experiencing problems with the application, try disabling it. A re-installation of the application may help as well. Installation: NOTE: You will need a Windows XP, Vista or Windows 7 for this procedure. Install your preferred media player, and install an audio CD. Once finished installing, open the installer, and follow the instructions. If you have an international version of the application, you'll have to install and set a character encoding. Follow this step by step guide: Download Advanced Translator Enable the Universal TTS Install the Microsoft Advanced Translator from a CD or DVD or from a Windows Explorer Shortcut (.LNK). Navigate to the installation folder. Launch the Advanced Translator. Accept the license, and continue installation. If

you are experiencing issues with the installation, try uninstalling and reinstalling the program. If this does not work, reinstall to Windows 7. How to use: NOTE: When clicking on a character, it will open in a box and, once clicked, the character will be selected (highlighted) and can be copied or move around. The font names are displayed in an arrow box. When the picture is loaded, the name of the picture is displayed. On the top of the screen, you'll have an option button for each font. Try to select a font. Press on the above button, a preview of the selected font will be displayed. Press on the Preview button, you'll see the name of the font. To see a69d392a70

Full screen mode, so you can do it while working on the picture. Some extra features are enabled in the Fullscreen Mode such as: Zoom, Scaling and Google Translate. Features: Search for all possible text in a picture using different tools (Regexp, context based, partial) and pre-built fonts. Compose previews of all matches and highlight possible related texts to the matched font. FontGenius Setup: FontGenius (as the name already suggests) needs pre-trained or somehow already "understood" fonts. Therefore, the application will try to find "good" fonts by analyzing the picture. New: The application now detects possible "chunky" fonts, i.e. fonts that don't look quite perfect but still can be used. The application also still recognizes monochrome fonts, while many other applications seem to ignore those. Improved: Previews of the possible texts are now clearer, and text highlighting is done in a cleaner way. Old: The application used to be very slow with some pictures that the program was not able to recognize. Now, the application is much faster and thus also capable of loading faster pictures. New: Some font characters are now being prepressed for better recognition. FontGenius DEMO: The current FontGenius demo includes some demo pictures that showcase the application's features. Please note that these images are not included in the application. Showing FontGenius Characters: Initialize FontGenius in fullscreen mode. Then, zoom in on the picture and the application starts analyzing the image. (If you see the current picture in a new window when you close this window, you must have zoomed out while the program was analyzing the picture.) Character analysis: The text is analyzed and shown in a "magnifier view": If a match is found, one or multiple associated texts are now shown in a "highlight view" that is centered on the matching text. Each highlight is shown with a colored box: The preview window (or "magnifier view") can be resized to see more or less fonts at once. Notes: The application is optimized to work best with a screen resolution of 1280 pixels and higher. It uses a bitmap which can be easily scaled/
